

EMT ESTONIA SELECTS JUNIFER SYSTEMS

London (13/09/10) [Junifer Systems](#), the global provider of leading Interconnect / Wholesale billing and customer care products, today announced that [EMT Estonia](#), the largest Estonian mobile operator, is implementing the [Junifer Interconnect System](#) to manage its interconnect and wholesale agreements.

EMT has more than 750,000 customers - the [Junifer Interconnect System](#) is now handling in excess of 100 million transactions per month for EMT, processing every kind of traffic such as voice and messaging to interconnection services in a single integrated system.

Margus Malv, Network Manager, EMT Estonia said: "We were impressed by the breadth of Junifer Systems' Telco experience and its engineering team's expertise. Junifer Systems products are technically advanced and designed to deal with all types of mobile traffic. The technology they have developed is more advanced, cost effective and easy to use than anything else we've seen and thanks to their proven experience in Settlements / Interconnect systems the migration of our existing system was straightforward, seamless and painless. We believe this new technology provides a strong platform for our continuing competitive advantage and company growth."

The Junifer Interconnect System utilises the latest technology in a three tier architecture with C#, Java and any standard recognised database. This provides the immediate benefit of running in either MS Windows, Unix or Linux environments. Through its component architecture the system has been designed to ensure rapid deployment timescales. The intuitive and easy to use GUI ensures even the most complex products and transactions may be managed without the need for highly trained technical consultants.

Paul Fitzgerald, Sales Director, Junifer Systems added: "We are delighted to be working with one of the leading Mobile Operators in the Baltic region. Our extensive operational experience of large volume, high throughput environments means we have designed a highly scalable and flexible product suite that is both cost effective and simple to use. This enables real-time decision making and adds genuine value where it's needed most."
