

**JUNIFER SYSTEMS SHOWCASES METER DATA MANAGEMENT SYSTEM
AT SMART METERING SCANDINAVIA
14th - 15th March 2011, Oslo, Norway**

Junifer Systems, the global provider of leading back office solutions for the Utility industry, is a sponsor at Smart Metering Scandinavia and will be showcasing its latest Meter Data Management System (MDMS) at the event. Junifer Systems' innovative MDMS is currently being deployed with a regional Swedish Utility Company.

Junifer Systems' MDMS takes information from any Automated Meter Reading (AMR) system to deliver alerts, pattern matching, forecasting, modelling and comprehensive reporting. The system can be used for a wide range of network analysis and also delivers additional information such as checks on outages.

Paul Fitzgerald, Sales & Marketing Director for Junifer Systems said: "Our team of developers created a robust Meter Data Management System (MDMS) which is meter independent, easy to deploy and causes no disruption to existing systems. Our product is designed to organise data to deliver business intelligence and support the unique challenges faced by the Utility industry - whether that be billing, reporting, modelling for new product development or real-time decision making on pricing initiatives. Our extensive experience of large volume, high throughout environments means we add genuine value to our customers. Our Meter Data Management System leverages their legacy systems to meet the smart billing requirements of tomorrow."

The Junifer Systems' product suite is highly scalable, flexible, cost-effective and user friendly. It simplifies the complex processing of vast quantities of data, taking volumes of data from disparate sources, collating the information and presenting it in an easy to understand format. Junifer Systems' MDMS system organises information from smart meter sources, making it easy to analyse and manage.

The Junifer Systems team has utilised its strong background in the complex, large transaction volume Telecomms billing sector to provide highly efficient, flexible and cost effective back-office solutions for the Utilities market.

About Junifer Systems

Headquartered in London, Junifer Systems provides complete Customer Information Systems (CIS) to the utility industry, specialising in billing systems for Smart Meter deployments. For more details please visit www.junifersystems.com
